

hap1:	1	0	0	1	0	1	1	.	.	.
pat:	.	.	0	1	0	1	0	1	0	1
mat:	.	.	1	0	1	0	1	0	1	0

$\text{concordance}(\text{hap1}, \text{pat}) = 4/5 = 0.80$

$\text{concordance}(\text{hap1}, \text{mat}) = 1/5 = 0.20$

(sites are heterozygous, so the two concordances sum to 1)

$\text{concordance}(\text{hap1}, \text{pat}) > 0.5 \rightarrow \text{hap1} = \text{pat}$
